PROFILE SUMMARY

Dynamic Software Engineer specializing in React and JavaScript, with a passion for technology and innovation. Developed a feature-rich Employee Management System and a dynamic e-commerce website, enhancing productivity and user engagement. Proficient in problem-solving, data analysis with Power BI, and delivering creative, high-impact solutions with precision and efficiency.

PROJECT

- Developed a feature-rich Employee Management System using React.js, incorporating separate user and admin panels for streamlined task management. The system supports secure login for both roles, allowing the admin panel to assign tasks, set deadlines, and track employee progress in real-time. The employee panel enables task updates for better productivity and efficient task tracking.

- Engineered a dynamic e-commerce website utilizing React.js, allowing users to seamlessly browse, add, and remove products from the cart, offering a smooth and interactive shopping experience that enhances user engagement.

- Built an interactive Simon Says game using JavaScript, incorporating dynamic color patterns, and sound effects to challenge memory and improve user engagement through increased interaction.

- Created a highly interactive Power BI dashboard for data analysis, featuring insightful visualizations that empower data-driven decision-making and provide clear, actionable insights for business strategies.

Activities, Honors, and Accomplishments

A dynamic individual with experience in organizing university events and volunteering for community initiatives. Proven in leadership, time management, and collaboration, with achievements like 1st Rank(University level) in Smart India Hackathon, completing 250+ DSA problems on LeetCode and GFG, and excelling in event management and team leadership.
